Mr Ian Cornelius  
Managing Director  
Fuelstar International Limited  
Box 282  
RUNAWAY BAY QLD 4216  
AUSTRALIA

Dear Mr Cornelius

I am pleased to confirm that I have installed more than 50 Fuelstar units since 1992. Most of these have operated for more than 5 years and also for more than 250,000 kms.

Almost all of the units have been installed in light and heavy buses. In the light buses, all have been Toyota and the engine models have been 2H, 1HZ, 3B and 3L. In the heavy buses, the engine types have included Detroit, Scania, Mercedes and Leyland. These have varied in size between 9 and 12 litres.

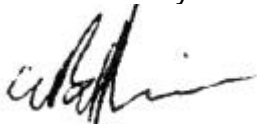

The improvement in running has been most noticeable. When Fuelstar units are removed from service, the deterioration in performance is also most noticeable. Had the units ceased to function, it is inevitable that the operator would be aware. In my mind, there is no question that the units continue to function correctly for as long as 5 years and, in all of the installations with which I've been involved, for as long as 10 years and they still continue to operate effectively to this day.

None of the Fuelstar units installed by me, from as early as 1991, have ceased to operate effectively.

Furthermore, I am pleased to confirm that the units improve engine running, increase power output, reduce fuel consumption, reduce emissions of particulate matter and prolong engine life. Further, they are the most effective product of which I am aware in killing diesel bacteria. They are far more effective than any biocide additives I have tried.

Please do not hesitate to let me know should you require any further information.

Yours faithfully

Geoff Rice
