To whom it may concern,

On the 15th of June, 2006 I had a Fuelstar PS245 installed onto my 2005 Ford BA 6 cylinder Ute. The vehicle had 9,711 kilometers on the speedo when it was installed by Major Auto Technics.

Before the unit was installed I was getting 630 kilometers to a tank of fuel, 85 litres. After the installation and traveling 4,000 kilometers the vehicle is now getting 750 kilometers to the tank, this is a staggering 19% reduction in my fuel bills. I believe the motor sounds to be running smoother than before. We are so happy with our investment we will be having our new Hyundai (delivery vehicle) fitted with a Fuelstar of the correct size.

Alan, thank you for introducing us to the Fuelstar product. I believe it does what you told me, and would recommend that all vehicles should be fitted with your product.

Regards

Bevan Phillips
