

SALES & SERVICE

Saturday, August 26, 2006

Hi Alan,

Sending you this letter to update you on the benefits gained using my Fuel Star.

I have a 1998 V8 Landcruiser. It is thirsty so was prepared to try anything to rain in the increasing fuel costs. We tow large boats all the time and this has become a major issue for us in our business.

I have been keeping a close eye on the consumption over the last 2 years so testing this for accuracy was no problem.

I had an average consumption towing of 29 litres per 100 kms and 25 litres per 100 kms without.

I have now had the Fuel Star fitted for 5000 kms and have seen really good results in the fuel consumption.

Towing now has gone below 25l per 100 (14%) and normal running has dropped below 20l per 100 (20%).

The best thing is the Cruiser is running so much smoother and with 300,000 coming up and this massive improvement in fuel usage we have decided to keep the old girl.

Power is up, noise is down and money is saved.

Many thanks for introducing such a great system to us.

Regards

Robert Gibellini
